

Frontend (Next.js/React.js & TypeScript, Redux, Mongoose) Preferable to go with Next.js

- **Add Expense Form:** Fields → `title`, `amount`, `category` (dropdown), `date` (date picker).
 - **Expense List View:**
 - Show all expenses in a table or card layout.
 - Display the total expense amount at the top.
 - Show category badges (e.g., Food, Transport, Shopping, Others).
 - **Edit/Delete Functionality:**
 - Edit button → pre-fill form with existing values.
 - Delete button → remove the expense from the list & database.
-

3. UI/UX & Responsiveness

- The application **must be fully responsive** for mobile, tablet, and desktop devices.
 - You are **free to determine the UI/UX design** of the entire application; creativity is encouraged.
 - Use any CSS framework (Tailwind CSS preferred, but Bootstrap/Chakra UI acceptable).
-

4. Bonus (Optional)

- Filter by category or date range.
- Chart.js or Recharts to show expenses by category in a pie chart.

- Deploy in Vercel.
-

Project Submission Guidelines

1. GitHub Repository

- Provide the GitHub repository link containing the project source code.
- Include a clear and detailed **README** file with step-by-step instructions for running both the backend and frontend.

2. Project Structure

- The backend and frontend may be placed in separate folders within the same repository or maintained in separate repositories.

3. Code Quality

- Ensure the code is **clean, well-structured, and properly commented** where necessary.

4. Version Control

- The repository must have **at least 10 meaningful Git commits** that reflect the project's development process.

5. Live Project Link

- Provide the **live, deployed link** to the project in your reply email along with the repository link.
-

Time Limit

- **Sunday Before the Bootcamp.**
